

To remove a repository from GitHub, you have a couple of options depending on whether you want to delete it entirely or just remove it from your view. Here are the steps for both scenarios:

➤ Remove a Repository from Your GitHub Account:

- ◆ If you want to remove a repository from your GitHub account (without deleting it entirely), follow these steps:

1. Navigate to the main page of the repository you want to remove.

2. Click on the "Settings" tab, located near the right side of the menu bar.

3. Scroll down to the Danger Zone section.

Pushes

- ☐ **Limit how many branches and tags can be updated in a single push** Beta
Pushes will be rejected if they attempt to update more than this. [Learn more about this setting](#), and send us your [feedback](#).

Danger Zone

Change repository visibility This repository is currently public.	Change visibility
Disable branch protection rules Disable branch protection rules enforcement and APIs	Disable branch protection rules
Transfer ownership Transfer this repository to another user or to an organization where you have the ability to create repositories.	Transfer
Archive this repository Mark this repository as archived and read-only.	Archive this repository
Delete this repository Once you delete a repository, there is no going back. Please be certain.	Delete this repository

4. Find and click on the "Transfer" tab.

5. Enter the name of the repository in the provided field.
6. Type the name of the new owner (it can be another user or organization on GitHub).
7. Confirm the transfer by typing the repository name.
8. Click "I understand, transfer this repository."

This will transfer ownership of the repository to the specified user or organization, effectively removing it from your GitHub account.

➤ Delete a Repository (Irreversible):

- ◆ If you want to permanently delete a repository, follow these steps. Be very cautious, as this action is irreversible and will delete all the repository data:

1. Navigate to the main page of the repository you want to delete.
2. Click on the "Settings" tab, located near the right side of the menu bar.
3. Scroll down to the Danger Zone section.
4. Find and click on the "Delete this repository" button.
5. Enter the name of the repository in the provided field.
6. Click the "I understand the consequences, delete this repository" button.

This will permanently delete the repository and all its contents. Make sure you have backed up any important data before proceeding.

Remember that deleting a repository is a permanent action, and you cannot recover the repository or its data once it's deleted. If you're unsure, consider transferring ownership to another GitHub account rather than deleting it outright.
